***Election/Restrictions***

Applicant's election without traverse of Group II, claims 14-22 in the reply filed on December 12, 2008 is acknowledged.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 14-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 14-22 are method claims that depend from product claims, and are improper hybrid claims. It is unclear what method steps correspond to the product limitations in the base claims. In claims 18 and 22, the recitation of "a substrate" is unclear because it appears that the base claim already includes a substrate (the medium).

***Allowable Subject Matter***

Claims 14-22 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to disclose or suggest a method for manufacturing an information storage medium comprising:

providing a substrate having an approximately plane front face and an approximately plane opposite back face, wherein the substrate is configured to be read and/or written by a read and/or write device placed facing the front face;

predetermining a distance separating the front face from a magnetic deposit being such that the read and/or write device can read and/or write the information in the magnetic deposit,

providing recessed areas in the back face having the predetermined distance between the front face and the bottom of the recessed areas, and

providing the magnetic deposit used for information storage within the recessed areas, thereby forming a discrete information storage array on the back face wherein each recessed area is configured to contain at least one magnetic domain representing an elementary bit defined by a magnetization direction, as in the context of claim 14.

The closest prior art, Hieda et al, disclose to form recessed areas in the front face. There is no motivation to provide recessed area in the back face, and configured such as cited within the context of claim 14, because of the different orientation that such requires when using the information storage medium. Although the processing steps are the same, whether the recesses are formed on a front face or a back face, Hieda fails to disclose or suggest flipping the substrate over so that the distance between the front face and the magnetic deposit is predetermined in order to enable the formation of a discrete information storage array on a back face that can be read and or/written by a read and/or write device.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art shows methods of forming information storage media having recessed areas with magnetic deposits.
